

Protecting Public Health and the Environment

PROJECT INFORMATION SHEET

FY 2016/17 Gravity Sewer Improvements San Anselmo – Nokomis and Meadowcroft

As part of maintaining the 200 miles of collection sewer lines operated by Ross Valley Sanitary District (RVSD), a Capital Improvement Program (CIP) is underway with construction projects needed to protect public health and the environment by reducing the risk of sewer overflows. Work to replace outdated system infrastructure and enhance system reliability is taking place in your neighborhood.

The **San Anselmo – Nokomis and Meadowcroft Sewer Improvements** will replace old or outdated system infrastructure and enhance local wastewater system reliability and efficiency. Construction to improve system performance during wet weather will involve rehabilitation of 3,300 linear feet (LF) of sewer pipeline ranging in size from 18 to 24 inches in diameter and work on associated structures. The project is being completed at a cost of \$4 million.

PROJECT COORDINATION

RVSD, Marin Municipal Water District (MMWD), the Town of San Anselmo and Marin County are coordinating to reduce construction impacts from other projects in the Morningside and Brookside neighborhoods this summer. MMWD is replacing waterlines on Butterfield Rd. from Sir Francis Drake Blvd. to Kenrick Ave. RVSD plans to follow with sewer construction on Butterfield Rd. in summer 2019 and summer 2020.

These projects will rehabilitate critical water and sewer infrastructure and add an easterly sidewalk from Sir Francis Drake Blvd. to Brookside Elementary School, provide road sealing from Sir Francis Drake Blvd. to Kenrick Ave., and widen a narrow section of The Alameda to provide a safer route and enhance fire and police access.

RVSD PROJECT CONSTRUCTION WILL INCLUDE

- Sanitary sewer replacements on public and private property.
- Sewer pipeline rehabilitation via open-cut removal and replacement (~2,170 LF), pipe reaming (~440 LF), pipe bursting (~350 LF) and cured-in-place pipe lining methods (~350 LF on Sycamore Ave.), with bypass pumping of sanitary sewer flow.
- Excavation, shoring and backfill, saw cutting and lateral replacement, pipe and manhole repairs and pavement restoration.

WHAT YOU CAN EXPECT

Please expect noise, dust, lane closures and detours, parking restrictions, travel delays and night-time work near the work sites during construction activity. Written notification and road signage with specific construction details will come from the contractor. Mail and package delivery to these areas will not be interrupted. Local and emergency access will be maintained at all times.
